Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates “ in particular genus Homo “ and leading to the emergence of Homo sapiens as a distinct species of the hominid family, the great apes. This process involved the gradual development of traits such as human bipedalism and language, as well as ...

Main Text Introduction. Physical inactivity is a known, but modifiable, risk factor that contributes to lifestyle-related diseases, including many causes of “preventable death” (Booth et al., 2012). Worldwide, approximately one in three adults and four in five adolescents do not achieve the recommended quantity and quality of daily exercise (Hallal et al., 2012).
