Relational algebra, first created by Edgar F. Codd while at IBM, is a family of algebras with a well-founded semantics used for modelling the data stored in relational databases, and defining queries on it.. The main application of relational algebra is providing a theoretical foundation for relational databases, particularly query languages for such databases, chief among which is SQL

Until 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract. A vector space over a field  $F$  (often the field of the real numbers) is a ...

Chapter 1 LINEAR EQUATIONS 1.1 Introduction to linear equations A linear equation in  $n$  unknowns  $x_1, x_2, \dots, x_n$  is an equation of the form  $a_1x_1 + a_2x_2 + \dots + a_nx_n = b$ , where  $a_1, a_2, \dots, a_n, b$  are given real numbers. For example, with  $x$  and  $y$  instead of  $x_1$  and  $x_2$ , the linear equation  $2x+3y = 6$  describes the line passing through the points  $(3, 0)$  and  $(0, 2)$ .
