Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.

Looking for a job in biology? Pursuing a career in biology can be immensely rewarding and exciting. Studying biology teaches us to ask questions, make observations, evaluate evidence, and solve problems. Biologists learn how living things work, how they interact with one another, and how they evolve. They may study cells under a microscope, insects in a rainforest, viruses that affect human ...

A not always very easy to read, but practical copy & paste format has been chosen throughout this manual. In this format all commands are represented in code boxes, where the comments are given in blue color. To save space, often several commands are concatenated on one line and separated with a semicolon ';

WI-38 is a diploid human cell strain composed of fibroblasts derived from lung tissue of a 3-months gestation female fetus. The cell strain, isolated by Leonard Hayflick in the 1960s, has been used extensively in scientific research, with applications ranging from developing important theories in molecular biology and aging to the production of most human virus vaccines.

Dromaeosauroides was a theropod dinosaur that lived around 140 million years ago during the Early Cretaceous, making it one of the oldest known dromaeosaurs. In 2000 and 2008, two fossilised teeth from this genus (cast pictured) were discovered in the Jydegaard Formation in the Robbedale valley, on the island of Bornholm, Denmark, in the Baltic Sea. It is the first dinosaur reported from Denmark.
