The Brickmaking Process Clay Preparation Molding the Clay Drying the Bricks Firing the Bricks. This page is only an introduction to brickmaking. Links to a very detailed description of the brickmaking process can be found on the More Resources page.

The Brickmaking Process

Handmade brick production ranged up to 36,000 bricks per week but by 1925 a brickmaking machine made 12,000 bricks a day. As brick structures could be built much quicker and cheaper, they replaced other raw materials like stone or rock.

The History of Bricks and Brickmaking - brickarchitecture.com

A brick is building material used to make walls, pavements and other elements in masonry construction. Traditionally, the term brick referred to a unit composed of clay, but it is now used to denote any rectangular units laid in mortar. A brick can be composed of clay-bearing soil, sand, and lime, or concrete materials. Bricks are produced in numerous classes, types, materials, and sizes which ...
