A baseball pitcher does positive work on the ball by applying a force to it over the distance it moves while in his grip.

Work (physics) - Wikipedia

Work is the energy transferred to an object by the force that acts on the object in the direction of its displacement. Work is a scalar quantity, and is measured in joules (J) in the SI system of units. The work done by a force F on an object that moves a distance d in the direction of the force is given by the equation $W = Fd$. If the force and displacement are not in the same direction, the work done is given by $W = Fd \cos \theta$, where θ is the angle between the force and the displacement. Work is done on an object when a force is applied to it and it moves in the direction of the force. Work is done by an object when it exerts a force on another object and the other object moves in the direction of the force. Work is done on an object when a force is applied to it and it moves in the direction of the force. Work is done by an object when it exerts a force on another object and the other object moves in the direction of the force.
