Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ...

Batteries For Electric Vehicles: Materials And

Contact mechanics is the study of the deformation of solids that touch each other at one or more points. A central distinction in contact mechanics is between stresses acting perpendicular to the contacting bodies' surfaces (known as the normal direction) and frictional stresses acting tangentially between the surfaces. This page focuses mainly on the normal direction, i.e. on frictionless ...

Rutgers Physics News Prof. Jak Chakhalian's group has used "atomic engineering" to realize a room temperature two-dimensional polar metal in superlattices of BaTiO₃/SrTiO₃/LaTiO₃. Polar metallic oxides, which sometimes are called "ferroelectric metals", are commonly defined by the coexistence of polar crystal structure and metallicity and were thought to be nonexistent.
