Internet Architecture Board (IAB) approved Simple Network Management Protocol (SNMP) as a short-term solution for network management. Standards like SNMP and Common Management Information Protocol (CMIP) paved the way for standardized network management and development of innovative network management tools and applications.

MPLS Network Management: MIBs, Tools, and Techniques is the first and only book that will help you master MPLS management technologies and techniques, as they apply to classic MPLS networks, traffic-engineered networks, and VPNs.

### **MPLS Network Management: MIBs, Tools, and Techniques (The**

to work, network devices make use of a data store called the Management Information Base (MIB). All SNMP compliant devices contain an MIB that consists of information on valid attributes of a device. Some attributes

in the MIB are fixed, while others are dynamic values calculated by the Network Management System (NMS).

SNMP stands for Simple Network Management Protocol. It is a standard way of monitoring hardware and software from nearly any manufacturer, from Juniper, to Cisco, to Microsoft, Unix, and everything in between. SNMP requires only a couple of basic components to work: a management station, and an agent.
