### **regents earth science materials**

Move the sun, earth, moon and space station to see how it affects their gravitational forces and orbital paths. Visualize the sizes and distances between different heavenly bodies, and turn off gravity to see what would happen without it!

Internal structure. Like Earth, Mars has differentiated into a dense metallic core overlaid by less dense materials. Current models of its interior imply a core with a radius of about 1,794 ± 65 kilometers (1,115 ± 40 mi), consisting primarily of iron and nickel with about 16–17% sulfur. This iron(II) sulfide core is thought to be twice as rich in lighter elements as Earth's.

### **Mars - Wikipedia**

We are told most satellites orbit the Earth at altitudes of over 500km to avoid atmospheric drag, with a few circling in Medium Earth Orbit which goes up to 35,786km!. As you can see, all three objects above are in the seriously ferocious hot zone.

### **Space machines do not orbit the Earth – The Wild Heretic**

Europa orbits Jupiter in just over three and a half days, with an orbital radius of about 670,900 km. With an eccentricity of only 0.009, the orbit itself is nearly circular, and the orbital inclination relative to Jupiter's equatorial plane is small, at 0.470°. Like its fellow Galilean satellites, Europa is tidally locked to Jupiter, with one hemisphere of Europa constantly facing Jupiter.

Chinese space laboratory Tiangong-1 is predicted to re-enter Earth's atmosphere in late April, but where or when it will reach the surface is hard to say.

### **Chinese space lab to fall back to Earth in March - Phys.org**

Earth Location and Seasons The Earth is at four different points in its orbit around the Sun when we have each season. Where is the Earth when it is summer (or winter, fall, and spring)?

### **Reasons for the Seasons WebQuest Worksheets**

Chinese Space Lab Crashes To Earth : The Two-Way Tiangong-1, an abandoned Chinese orbiting lab, re-entered the atmosphere over the South Pacific Ocean Sunday evening, fulfilling predictions by the ...

Fig. 2 Radar data collected by MARSIS. (A) Radargram for MARSIS orbit 10737, whose ground track is shown in Fig. 1B. A radargram is a bi-dimensional color-coded section made of a sequence of echoes in which the horizontal axis is the distance along the ground track of the spacecraft, the vertical axis represents the two-way travel time of the echo (from a reference altitude of 25 km above the ...
