BIOINITIATIVE 2012 - CONCLUSIONS Table 1-1 (Genetics and Neurological Effects Updated March 2014)
Overall, more than 1800 or so new studies report abnormal gene transcription (Section 5);

BIOINITIATIVE 2012 - CONCLUSIONS Table 1-1

Pseudogenes, sometimes referred to as zombie genes in the media, are segments of DNA that are related to real genes. Pseudogenes have lost at least some functionality, relative to the complete gene, in cellular gene expression or protein-coding ability. Pseudogenes often result from the accumulation of multiple mutations within a gene whose product is not required for the survival of the ...

Pseudogene - Wikipedia

In biology, a gene is a sequence of DNA or RNA that codes for a molecule that has a function. During gene expression, the DNA is first copied into RNA. The RNA can be directly functional or be the intermediate template for a protein that performs a function. The transmission of genes to an organism's offspring is the basis of the inheritance of phenotypic traits.

Fig. 1. Construction of the disease bipartite network. (Center) A small subset of OMIM-based disorder-disease gene associations, where circles and rectangles correspond to disorders and disease genes, respectively. A link is placed between a disorder and a disease gene if mutations in that gene lead to the specific disorder.

Autism Spectrum Disorders (ASDs) are a group of developmental disabilities that can cause significant

social, communication and behavioral challenges. CDC is working to find out how many children have ASDs, discover the risk factors, and raise awareness of the signs.

What's New! Coregulation Data Harvester Posted on 2017-08-16 by ciliate-curator. The Co-regulation Data Harvester (CDH) is a software tool that allows the rapid collection of annotation data for co-regulated Tetrahymena genes. Thank you to Lev Tsy-pin and Aaron Turkewitz for contributing this valuable program to the community.
