Petroleum geology is the study of origin, occurrence, movement, accumulation, and exploration of hydrocarbon fuels. It refers to the specific set of geological disciplines that are applied to the search for hydrocarbons (oil exploration)

### **Petroleum geology - Wikipedia**

A foreland basin is a structural basin that develops adjacent and parallel to a mountain belt. Foreland basins form because the immense mass created by crustal thickening associated with the evolution of a mountain belt causes the lithosphere to bend, by a process known as lithospheric flexure. The width and depth of the foreland basin is determined by the flexural rigidity of the underlying ...

History of WCSB Light Oil Production. Although there were earlier light oil discoveries in western Canada, such as Turner Valley in 1914, Norman Wells in 1920, and heavy oil at Wainwright in 1923, the giant Leduc discovery in 1947 really marked the beginning of the oil age in western Canada.
