Dynamical systems theory is an area of mathematics used to describe the behavior of the complex dynamical systems, usually by employing differential equations or difference equations. When differential equations are employed, the theory is called continuous dynamical systems. From a physical point of view, continuous dynamical systems is a generalization of classical mechanics, a generalization ...

Dynamical systems theory - Wikipedia

In mathematics, a system of linear equations (or linear system) is a collection of two or more linear equations involving the same set of variables. For example, $x + y = 1$, $x + y + z = 1$, $x + y + z = 1$ is a system of three equations in the three variables x , y , z . A solution to a linear system is an assignment of values to the variables such that all the equations are simultaneously satisfied.

Although the OP asked about Microsoft Word 2010, there is another option in Microsoft Word 2016 that seems to work better. Based on this MSDN blog post, it is now possible to insert right-aligned equation numbers natively within the equation block. With this solution, there is no need for a table or style separators.
