Green roofs provide a thermal mass layer which helps reduce the flow of heat into a building. The solar reflectance of green roofs varies depending on the plant types (generally 0.3–0.5). Green roofs may not reflect as much as a cool roof but do have other benefits such as evapotranspiration which cools the plants and the immediate area around the plants, aiding in lowering rooftop ...

Thatching is the craft of building a roof with dry vegetation such as straw, water reed, sedge (*Cladium mariscus*), rushes, heather, or palm fronds, layering the vegetation so as to shed water away from the inner roof. Since the bulk of the vegetation stays dry and is densely packed – trapping air – thatching also functions as insulation. It is a very old roofing method and has been used in both ...
